

0.1 `put.start`: Set specific starting values for certain parameters

Description

After calling `set.start` to create default starting values, use `put.start` to change starting values for specific parameters or parameter sets.

Usage

```
put.start(start.val, value, terms, eqn)
```

Arguments

<code>start.val</code>	the vector of starting values created by <code>set.start</code>
<code>value</code>	the scalar or vector of replacement starting values
<code>terms</code>	the terms output from <code>model.frame.multiple</code>
<code>eqn</code>	character vector of the parameters for which you would like to replace the default values with <code>value</code>

Value

A vector of starting values (of the same length as `start.val`)
