

Not an Introduction to fritools

Andreas Dominik Cullmann

August 15, 2023

This is not a vignette at all as *fritools* is just a set of miscellaneous utilities, tools and helper functions written for the Forest Research Institute of the State Baden-Wuerttemberg, Germany.

fritools does not use any other packages than those in the R Core. It does not import or depend on any third party package.

All functions belong to at least one of these families:

```
> path <- system.file(package = "fritools")
> if (file.exists(file.path(path, "source")))
+   path <- file.path(path, "source")
> fmsa <- fritools::find_missing_see_also
> f <- capture.output(type = "message",
+                     missing <- suppressWarnings(fmsa(path = path,
+                                                       list_families = TRUE)))
> print(f)

[1] "Families so far: "                "Other CSV functions"
[3] "Other call functions"            "Other operating system functions"
[5] "Other statistics"                "Other searching functions"
[7] "Other German umlaut converters" "Other file utilities"
[9] "Other test helpers"              "Other option functions"
[11] "Other version functions"         "Other script path getter functions"
[13] "Other bits and pieces"           "Other subsetting functions"
[15] "Other logical helpers"           "Other package functions"
[17] "Other R memory functions"        "Other hash functions for objects"

> if (length(missing) > 1) {
+   print(missing)
+   stop("Functions without context.")
+ } else {
+   print("All functions with context.")
+ }
```

```
[1] "All functions with context."
```

That's all.
