nephro-package *Biostatistics utilities for nephrology*

Description

Set of tools for the estimation of kidney function and related traits.

Included are the following glomerular filtration rate (GFR) estimating functions: the Modification of Diet in Renal Disease (MDRD) study equations based on four (MDRD4) or six (MDRD6) parameters (Levey 1999; Levey 2006); the CKD-Epi equations for serum creatinine with the race coefficient (CKDEpi.creat) and without the race coefficient (CKDEpi2021.creat); the CKD-Epi equation for cystatin C (CKDEpi.cys); the CKD-Epi equation for the combination of creatinine and cystatin C with (CKDEpi.creat.cys) and without (CKDEpi2021.creat.cys) the race coefficient (Inker 2012; Inker 2021); the three equations proposed by Stevens 2008 based on cystatin C only (Stevens.cys1), age- and sex-weighted cystatin C (Stevens.cys2), and a combination of cystatin C and creatinine (Stevens.creat.cys); the classic Cockroft and Gault 1976 equation for creatinine clearance estimation (CG); the equation by Virga (2007) (Virga); the race-free equations developed by the European Kidney Function Consortium (EKFC) including sex and age based on serum creatinine (EKFC.creat) (Pottel 2021) and based on serum cystatin C with (EKFC.cys) and without (EKFC_SF.cys) the sex coefficient (Pottel 2023); the full age spectrum (FAS) equations using serum creatinine (FAS.creat) (Pottel 2016), cystatin C (FAS.cys), and their combination (FAS.creat.cys) (Pottel 2017); the Schwartz bedside formula (Schwartz.Bedside) (Schwartz 2009).

A comparative description of several GFR-estimating functions included in the initial version of the package can be found in Pattaro (2013). Extensive literature does exist that compares the methods described.

Additional serum biomarkers are the blood urea nitrogen (BUN)-to-creatinine ratio (BCR and the urea-to-creatinine ratio UCR.

Urine biomarkers included are the albumin-to-creatinine ratio UACR and the protein-to-creatinine ratio UPCR

Some unit conversion functions are provided to facilitate operations.

BCR *BUN-to-creatinine ratio*

Description

Calculate the plasma or serum BUN-to-creatinine ratio

Usage

```
BCR(BUN, creatinine)
```

Arguments

BUN	Numeric vector in mg/dL
creatinine	Numeric vector in mg/dL; 0s will be automatically converted into NAs

Value

A numeric vector with BCR values.

Author(s)

Cristian Pattaro

References

Dossetor JB. Creatininemia Versus Uremia. The relative significance of blood urea nitrogen and serum creatinine concentrations in azotemia. *Ann Int Med.* 1966; **65**(6): 1287-1299.

See Also

UCR

CG *Cockroft and Gault equation*

Description

Creatinine clearance is estimated with the Cockroft and Gault formula.

Usage

```
CG(creatinine, sex, age, wt)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
wt	Numeric vector with weight in kg

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Cockroft DW, Gault MH. Prediction of creatinine clearance from serum creatinine. *Nephron* 1976; **16**: 31-41.

See Also

CKDEpi.creat, MDRD4, Virga

`CKDEpi.creat` *CKD-EPI equation for serum creatinine*

Description

GFR is estimated with the CKD-EPI Study equation based on IDMS serum or plasma creatinine.

Usage

```
CKDEpi.creat(creatinine, sex, age, ethnicity)
```

Arguments

`creatinine`	Numeric vector with serum or plasma creatinine values in mg/dl
`sex`	Numeric vector with 0 for females and 1 for males
`age`	Numeric vector with age in years
`ethnicity`	Numeric vector with 0 for non-Black and 1 for Black individuals

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Inker LA, *et al*. Estimating glomerular filtration rate from serum creatinine and cystatin C. *N Engl J Med* 2012; **367**: 20-29.

See Also

`CKDEpi.creat.cys`, `CKDEpi.cys`, `CKDEpi2021.creat`

`CKDEpi.creat.cys` *CKD-EPI equation for creatinine and cystatin C*

Description

CKD-EPI equation to estimate GFR based on a combination of creatinine and cystatin C

Usage

```
CKDEpi.creat.cys(creatinine, cystatin, sex, age, ethnicity)
```

Arguments

`creatinine`	Numeric vector with serum or plasma creatinine values in mg/dl
`cystatin`	Numeric vector with serum or plasma cystatin C values in mg/dl
`sex`	Numeric vector with 0 for females and 1 for males
`age`	Numeric vector with age in years
`ethnicity`	Numeric vector with 0 for non-Black and 1 for Black individuals

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Inker LA, *et al*. Estimating glomerular filtration rate from serum creatinine and cystatin C. *N Engl J Med* 2012; **367**: 20-29.

See Also

`CKDEpi.creat`, `CKDEpi.cys`, `CKDEpi2021.creat.cys`

CKDEpi.cys *CKD-EPI equation for cystatin C*

Description

GFR is estimated with the CKD-EPI equation for cystatin C proposed by Inker et al., N Engl J Med 2012

Usage

```
CKDEpi.cys(cystatin, sex, age)
```

Arguments

cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Inker LA, *et al*. Estimating glomerular filtration rate from serum creatinine and cystatin C. *N Engl J Med* 2012; **367**: 20-29.

See Also

CKDEpi.creat, CKDEpi.creat.cys

CKDEpi2021.creat *Race-free CKD-EPI equation for serum creatinine*

Description

GFR is estimated with the CKD-EPI Study equation based on serum creatinine without the ethnicity coefficient.

Usage

```
CKDEpi2021.creat(creatinine, sex, age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Ryosuke Fujii

References

---

CKDEpi2021.creat.cys *Race-free CKD-EPI equation for serum creatinine and cystatin C*

Description

CKD-EPI equation to estimate GFR based on a combination of creatinine and cystatin C without the ethnicity coefficient

Usage

```
CKDEpi2021.creat.cys(creatinine, cystatin, sex, age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Ryosuke Fujii

References

Inker LA, *et al*. New creatinine- and cystatin C-based equations to estimate GFR without race. *N Engl J Med* 2021; **385**: 1737-1749.

`Convert.mgdL.mmolL` *Convertion formula to change from mg/dL to mmol/L and vice versa*

Description

mg/dL <–> mmol/L conversion

Usage

```
Convert.mgdL.mmolL(mg.dL, mmol.L)
## If your variable X is expressed in mg/dL, use: Convert.mgdL.mmolL(mg.dL=X)
## If your variable X is expressed in mmol/L, use: Convert.mgdL.mmolL(mmol.L=X)
```

Arguments

`mg.dL`	Provide a numeric vector in mg/dL to be converted into mmol/L
`mmol.L`	Provide a numeric vector in mmol/L to be converted into mg/dL

Value

A numeric vector with the converted values.

Author(s)

Cristian Pattaro

See Also

`Convert.mgdL.umolL`

Convert.mgdL.umolL *Convertion formula to change from mg/dL to umol/L and vice versa*

Description

mg/dL <–> umol/L conversion

Usage

```
Convert.mgdL.umolL(mg.dL, umol.L)
## If your variable X is expressed in mg/dL, use: Convert.mgdL.mmolL(mg.dL=X)
## If your variable X is expressed in umol/L, use: Convert.mgdL.mmolL(umol.L=X)
```

Arguments

mg.dL	Provide a numeric vector in mg/dL to be converted into umol/L
umol.L	Provide a numeric vector in umol/L to be converted into mg/dL

Value

A numeric vector with the converted values.

Author(s)

Cristian Pattaro

See Also

Convert.mgdL.umolL

EKFC.creat *EKFC equation for serum creatinine*

Description

EKFC equation for serum creatinine modified from FAS equation

Usage

```
EKFC.creat(creatinine, sex, age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

See Also

`EKFC.cys`, `CKDEpi.creat`

`EKFC.cys` *EKFC equation for cystatin C*

Description

EKFC equation for cystatin C that includes the sex coefficient, as proposed by Pottel et al., *N Engl J Med* 2023

Usage

```
EKFC.cys(cystatin, sex, age)
```

Arguments

`cystatin`	Numeric vector with serum or plasma cystatin C values in mg/l
`sex`	Numeric vector with 0 for females and 1 for males
`age`	Numeric vector with age in years

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

References

EKFC_SF.cys

EKFC_SF.cys *Sex-free EKFC equation for cystatin C*

Description

EKFC equation for cystatin C without the sex coefficient as proposed by Pottel et al., *N Engl J Med* 2023

Usage

```
EKFC_SF.cys(cystatin, age)
```

Arguments

cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
age	Numeric vector with age in years

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

References

Pottel, H, *et al*. Cystatin C-Based Equation to Estimate GFR without the Inclusion of Race and Sex. *N Engl J Med* 2023; **388**: 333-343.

EKFC.cys

FAS.creat *FAS equation for serum creatinine*

Description

Full age spectrum (FAS) equation to estimate GFR based on serum creatinine

Usage

```
FAS.creat(creatinine, sex, age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

References

See Also

FAS.creat.cys, FAS.cys

FAS.creat.cys *FAS equation for creatinine and cystatin C*

Description

Full age spectrum (FAS) GFR estimation based on serum creatinine and cystatin C

Usage

```
FAS.creat.cys(creatinine, cystatin, sex,age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

References

Pottel, H., *et al*. An estimated glomerular filtration rate equation for the full age spectrum from serum creatinine and cystatin C. *Nephrol Dial Transplant.* 2017; **32**: 497-507.

See Also

FAS.cys

FAS.cys *FAS equation for cystatin C*

Description

Full age spectrum (FAS) GFR estimation based on cystatin C

Usage

```
FAS.cys(cystatin, sex, age)
```

Arguments

cystatin	Numeric vector with serum or plasma cystatin values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Janina Herold

References

Pottel, H., *et al*. An estimated glomerular filtration rate equation for the full age spectrum from serum creatinine and cystatin C. *Nephrol Dial Transplant.* 2017; **32**: 497-507.

See Also

FAS.creat, FAS.creat.cys

MDRD4 *Four-parameter MDRD study equation*

Description

GFR is estimated with the 4-parameter Modification of Diet in Renal Disease (MDRD) study equation.

Usage

```
MDRD4(creatinine, sex, age, ethnicity, method = "IDMS")
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals
method	Defaults is 'IDMS' for IDMS-traceable creatinine; write 'other' if not IDMS

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

See Also

CKDEpi.creat, MDRD6, CG

MDRD6 *Six-parameter MDRD study equation*

Description

GFR is estimated with the 6-parameter Modification of Diet in Renal Disease (MDRD) study equation.

Usage

```
MDRD6(creatinine, sex, age, albumin, BUN, ethnicity, method = 'IDMS')
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
albumin	Numeric vector with serum or plasma albumin in g/dl
BUN	Numeric vector with blood urea nitrogen levels in mg/dl
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals
method	Defaults is 'IDMS' for IDMS-traceable creatinine; write 'other' if not IDMS

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Levey AS, *et al*. A more accurate method to estimate glomerular filtration rate from serum creatinine: a new prediction equation. Modification of Diet in Renal Disease Study Group. *Ann Intern Med.* 1999; **130**(6): 461-70.

MDRD4

Schwartz.Bedside *Bedside IDMS-traceable Schwartz GFR Calculator for Children*

Description

GFR is estimated with the Bedside Schwartz equation for Children based on IDMS serum or plasma creatinine.
This equation is valid in the 1-17 years age range.

Usage

```
Schwartz.Bedside(creatinine, ht, age)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
ht	Numeric vector with height in cm
age	Numeric vector with age in years

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Andrew Srisuwananukorn

References

Schwartz GJ, *et al*. New equations to estimate GFR in children with CKD. *J Am Soc Nephrol* 2009; **20**: 629-637.

Stevens.creat.cys *Stevens' formula for a combination of serum creatinine and cystatin C*

Description

GFR estimation using the 3rd formula proposed by Stevens et al. (Am J Kidney Dis 2008), which combines creatinine and cystatin C

Usage

```
Stevens.creat.cys(creatinine, cystatin, sex, age, ethnicity)
```

Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals

Value

The function returns a numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Stevens LA, *et al*. Estimating GFR using serum cystatin C alone and in combination with serum creatinine: a pooled analysis of 3,418 individuals with CKD. *Am J Kidney Dis* 2008; **51**: 395-406.

See Also

CKDEpi.creat.cys

Stevens.cys1 *GFR estimation using serum cystatin C*

Description

GFR is estimated with the 1st formula proposed by Stevens et al. (Am J Kidney Dis 2008), i.e.: as a simple transformation of cystatin C, without using any other information

Usage

```
Stevens.cys1(cystatin)
```

Arguments

cystatin	Numeric vector with serum or plasma cystatin C values in mg/l

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Stevens LA, *et al*. Estimating GFR using serum cystatin C alone and in combination with serum creatinine: a pooled analysis of 3,418 individuals with CKD. *Am J Kidney Dis* 2008; **51**: 395-406.

See Also

`Stevens.cys2`, `Stevens.creat.cys`, `CKDEpi.cys`

`Stevens.cys2` *Stevens' formula for serum cystatin C, age, and sex*

Description

GFR is estimated with the 2nd formula proposed by Stevens et al. (Am J Kidney Dis 2008), where cystatin C is weighted by sex and age

Usage

```
Stevens.cys2(cystatin, sex, age, ethnicity)
```

Arguments

`cystatin`	Numeric vector with serum or plasma cystatin C values in mg/l
`sex`	Numeric vector with 0 for females and 1 for males
`age`	Numeric vector with age in years
`ethnicity`	Numeric vector with 0 for non-Black and 1 for Black individuals

Value

A numeric vector with eGFR values in ml/min/1.73 m^2.

Author(s)

Cristian Pattaro

References

Stevens LA, *et al*. Estimating GFR using serum cystatin C alone and in combination with serum creatinine: a pooled analysis of 3,418 individuals with CKD. *Am J Kidney Dis* 2008; **51**: 395-406.

See Also

`Stevens.cys1`, `Stevens.creat.cys`, `CKDEpi.cys`

UACR *Urinary albumin-to-creatinine ratio*

Description

Calculate the urinary albumin-to-creatinine ratio

Usage

```
UACR(u.albumin, u.creatinine)
```

Arguments

`u.albumin`	Numeric vector in mg/dL
`u.creatinine`	Numeric vector in mg/dL; 0s will be automatically converted into NAs

Value

A numeric vector with UACR values.

Author(s)

Cristian Pattaro

References

Barratt TM, McLaine PN, Soothill JF. Albumin excretion as a measure of glomerular dysfunction in children. *Arch Dis Child.* 1970. **45**(242): 496-501

See Also

UPCR

UCR *Urea-to-creatinine ratio*

Description

Calculate the plasma or serum urea-to-creatinine ratio

Usage

```
UCR(urea, creatinine)
```

Arguments

urea	Numeric vector in mmol/L
creatinine	Numeric vector in umol/L; 0s will be automatically converted into NAs

Value

A numeric vector with UCR values.

Author(s)

Cristian Pattaro

References

Kahn S, *et al*. The significance of serum creatinine and the blood urea/serum creatinine ratio in azotaemia *S. Afr. Med. J.* 1972; **46**: 1828-1832.

See Also

BCR

UPCR *Urinary protein-to-creatinine ratio*

Description

Calculate the urinary protein-to-creatinine ratio

Usage

```
UPCR(u.protein, u.creatinine)
```

Arguments

u.protein	Numeric vector in mg/dL
u.creatinine	Numeric vector in mg/dL; 0s will be automatically converted into NAs

Value

A numeric vector with UPCR values.

`Virga` *Virga's formula*

Description

Virga's formula is based on serum creatinine, sex, age, and body weight.

Usage

```
Virga(creatinine, sex, age, wt)
```

Arguments

`creatinine`	Numeric vector with serum or plasma creatinine values in mg/dl
`sex`	Numeric 0/1 vector: 0 for females, 1 for males
`age`	Numeric vector with age in years
`wt`	Numeric vector with weight in kg

Value

A numeric vector with eGFR values in *ml/min/1.73 m^2*

Author(s)

Cristian Pattaro
